AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-16 (Canceled).

17. (Currently Amended) A method of ~~analyzing a mixture to determine~~ determining the presence of an analyte in a mixture, the method comprising,

providing an antibody capable of simultaneously binding to (a) an analyte which is a member of a binding pair and (b) a macromolecule in which the antibody's capability of binding to the macromolecule is reversibly inhibited by the presence of a photocleavable moiety,

mixing the ~~inhibited~~ antibody with a the mixture to be analyzed,

exposing the mixture to an electromagnetic energy to activate the antibody's capability ~~of the antibody~~ of to bind to the macromolecule,

binding the antibody to the macromolecule, and

assaying the macromolecule for the presence ~~for~~ of the analyte.

18. (Currently Amended) The method a claimed in claim 17, wherein the antibody is a bispecific antibody comprising a first antibody component capable of binding to a ~~receptor~~ the analyte and a second antibody component capable of binding to the a macromolecule.

19. (Currently Amended) The method as claimed in claim 18, wherein the first and second antibody components are parts of antibodies which retain the active site Fab or Fab_2' fragments but are fee of the Fc regions.

20. (Currently Amended) The method as claimed in claim 18, wherein the second antibody component ~~is against~~ binds to an enzyme.

21. (Currently Amended) The method as claimed in claim 20, wherein the enzyme is capable of converting a prodrug of a cytotoxic drug into the cytotoxic drug.

22. (Currently Amended) The method as claimed in claim 17, wherein the photocleavable moiety is 1-nitrophenylethan-1-ol conjugated to the antibody.

23. (Currently Amended) The method as claimed in claim 17, wherein the electromagnetic ~~radiation~~ energy is electromagnetic radiation.

24. (Currently Amended) The method as claimed in claim 17, wherein the electromagnetic ~~radiation~~ energy selected from the group consisting of ultraviolet, visible light, and x-rays.
